Letter Circular LC 95

## U. S. PETROLEUM OIL TABLES

Approved by
The American Petroleum Institute,
The U. S. Bureau of Mines, and
The U. S. Bureau of Standards.

Reduction of Observed Degrees A.P.I. to Degrees A.P.I. at 60°F

This table shows the degrees A. P. I. at 60° F. of oils having, at the observed temperatures, the degrees A. P. I. indicated. For example, if the observed degrees A. P. I. at 78° F. is 20, the degrees A. P. I. at 60° F. will be 19. Intermediate values can be conveniently interpolated. For example, if the observed degrees A. P. I. at 78° is 20.4, the degrees A. P. I. at 60° F. will be 19.4.

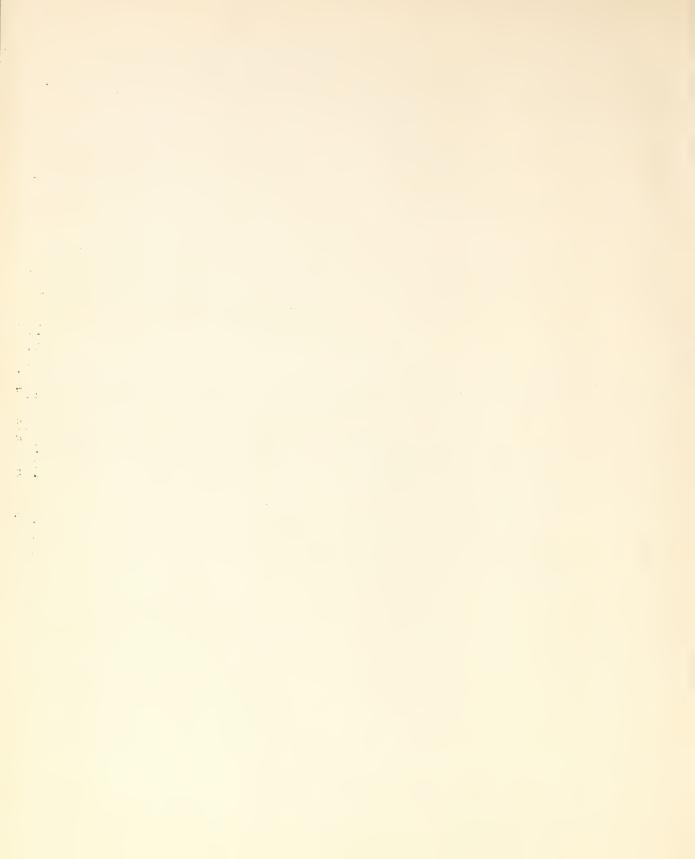

The headings "Observed degrees A. P. I." and "Observed Temperature" signify the true indication of the hydrometer and the true temperature of the oil, that is, the observed readings corrected for instrumental errors. (The table is so computed as to take into account the thermal expansion of the glass of which the hydrometer is made.)

This table is based upon the results of an investigation conducted by the Bureau of Standards on the "Density and Thermal Expansion of American Petroleum Oils," and published as Technologic Paper No. 77. The same data were used in computing the tables published in Bureau of Standards Circular No. 57, "United States Standard Table for Petroleum Oils."

It is the intention of the Bureau to publish in the near future, this and other petroleum oil tables as a Bureau Circular.
